

HAPPY VALENTINE'S DAY!

● Carbon ○ Oxygen ● Nitrogen ○ Hydrogen

DOPAMINE

Levels of dopamine in the brain increase when you're in love, giving feelings of pleasure. People repeat behaviours that lead to dopamine release.

SEROTONIN

Studies have shown serotonin levels to be lower in people who are in love. They suggest these lower levels can lead to anxiety and obsession.

ADRENALINE

Adrenaline, along with noradrenaline, is produced in stressful or exciting situations. It increases heart rate, and contributes to the thrill of being in love.
